

Task: ABC Technologies wants to develop an **Employee Payroll Management System** using MySQL. The company wants to store employee information, salary details, tax information, attendance timing, skills, and employment status.

Solution: Perform the following tasks:

1. Create a database named **PayrollDB**.
2. Create an **Employees** table using appropriate MySQL data types.
3. Use **NOT NULL**, **DEFAULT**, **AUTO_INCREMENT**, **PRIMARY KEY**, **ENUM**, **SET**, **BOOLEAN**, and **TIMESTAMP** wherever applicable.
4. Insert **25 employee records**.
5. Display all records.
6. Display selected columns.
7. Use **WHERE** clause with different conditions.
8. Use **ORDER BY**.
9. Display calculated fields like **Gross Salary**, **Tax Amount**, and **Net Salary**.
10. Update employee information.
11. Delete employee records.
12. Display the final table.

```
